## Introduction

Executive Order 12866 requires that federal agencies assess the cost and the benefits of intended regulations as part of their regulatory impact analyses (RIAs). The 1993 executive order stated that “recognizing that some costs and benefits are difficult to quantify, [each agency shall] propose or adopt a regulation only upon a reasoned determination that the benefits of the intended regulation justify its costs.”<sup>1</sup> In 2008, a federal appeals court remanded a rule in part, despite acknowledging the uncertainty, because the agency did not monetize climate-related benefits of anticipated emission reductions in its RIA.<sup>2</sup> In response, in 2008, federal agencies began using various values of the *social cost of carbon* (SCC or SC-CO<sub>2</sub>) as a means to estimate the climate-related benefits of abating emissions of carbon dioxide. Since then, they have begun using similar estimates for the benefits of reducing emissions of other greenhouse gases (GHG), including methane (CH<sub>4</sub>) and nitrous oxide (N<sub>2</sub>O).

The SC-CO<sub>2</sub> is an “estimate of the monetized damages associated with an incremental increase in carbon emissions in a given year,” according to a federal Interagency Working Group (IWG).<sup>3</sup> This group developed a range of SC-CO<sub>2</sub> values “to make it possible for agencies to incorporate the social benefits from reducing carbon dioxide emissions into cost-benefit analyses of regulatory actions that have small, or ‘marginal,’ impacts on cumulative global emissions.”<sup>4</sup> In the United States, the SC-CO<sub>2</sub> has been expressed as U.S. dollars per metric ton of carbon dioxide (\$/t CO<sub>2</sub>) for a given year’s emissions. Agencies primarily used their own, differing SC-CO<sub>2</sub> values until the IWG recommended in 2009 a set of values to improve consistency across regulations. Estimations of the *social cost of methane* (SC-CH<sub>4</sub>) and the *social cost of nitrous oxide* (SC-N<sub>2</sub>O) have used methods similar to those for the SC-CO<sub>2</sub>. Federal agencies began using the SC-CO<sub>2</sub> in regulatory actions in 2008, the SC-CH<sub>4</sub> in 2015, and SC-N<sub>2</sub>O in 2016. Since August 2016, federal agencies collectively call these analyses and applications the *social cost of greenhouse gases* (SC-GHG).

This report compiles a table of *Federal Register* notices related to federal regulatory actions that specifically cite the SC-CO<sub>2</sub>, SC-CH<sub>4</sub>, SC-N<sub>2</sub>O, or SC-GHG. The actions listed in

**Table 1** were identified by searches online of the *Federal Register*<sup>5</sup> for the terms “social cost of carbon,” “social cost of methane,” and “social cost.” The table below reflects searches completed by October 12, 2016.

**Table 1** first lists the actions that used the SC-CO<sub>2</sub> estimate and then the actions citing other SC-GHG estimates. The table includes proposed, final and additional actions, sometimes for the same rule (so a simple count of entries in the table would double-count the number of regulations with benefits calculated using the SC-GHG estimates). Almost all non-regulatory notices are omitted, including notices of funding availability for grant programs. A few entries contain commentary that identifies notices of key stages in development of an interagency SC-GHG—for example, that

an interagency process was underway or the first use of an interagency value. One column identifies which version of the SC-CO<sub>2</sub>, SC-CH<sub>4</sub>, or SC-N<sub>2</sub>O was cited in each regulatory action. In this report, CRS does not analyze the social cost values or methods used in the cited agency actions. It does not review or analyze the listed actions.

**Notes:** Abbreviations for offices, departments, and agencies are as follows:

- BLM: Department of the Interior Bureau of Land Management
- CEQ: Executive Office of the President Council on Environmental Quality
- DOE: Department of Energy
- DOI: Department of the Interior
- DOT: Department of Transportation
- EPA: Environmental Protection Agency
- FAA: Department of Transportation Federal Aviation Administration

- HUD: Department of Housing and Urban Development
- NHTSA: Department of Transportation National Highway Traffic Safety Administration
- OMB: Executive Office of the President Office of Management and Budget
- USDA: Department of Agriculture

- a. The *Federal Register* notice described two methods to compute the social costs of non-CO<sub>2</sub> gases, a “GWP approach” and the “Marten approach.” The proposed rule noted that EPA was undertaking peer review of the application of the Marten et al. (2014) non-CO<sub>2</sub> social cost estimates in regulatory analysis. Pending a favorable peer review, EPA planned to include estimated monetized benefits of CH<sub>4</sub> and N<sub>2</sub>O emission reductions in the main benefit-cost analysis of the RIA for the final rule, using the directly modeled estimates of SC-CH<sub>4</sub> and SC-N<sub>2</sub>O from Marten et al. The *Federal Register* notice sought comments on the use of the Marten approach for non-CO<sub>2</sub> GHGs. It also noted that work was in progress to develop methods to calculate the social cost of tropospheric ozone on climate change, though none was applied for this proposal.
- b. “ECP” means Energy Conservation Program. “ECS” means Energy Conservation Standard(s).

- c. “SCC” and “SC-CO<sub>2</sub>” both mean Social Cost of Carbon. “SC-CH<sub>4</sub>” means Social Cost of Methane.
- d. Tables of the SC-CO<sub>2</sub> values from the 2010 to 2015 references for this column are in an **Appendix** to this report. This column provides the date and origin of the values of SC-CO<sub>2</sub> or SC-CH<sub>4</sub> referred to in the associated federal action. “None” means that, although the SC-CO<sub>2</sub> or SC-CH<sub>4</sub> may have been mentioned, no quantitative value appeared to be used in that action; some cited actions invite comment on the use of such values. “IPCC” means SC-CO<sub>2</sub> values from the 2007 assessment of the Intergovernmental Panel on Climate Change (IPCC); “own” means values developed by an agency (sometimes in collaboration with another) and reported in that regulatory action; “2009” means interim interagency values as published in Table III.H.6–3, p. 29617 of the joint EPA and DOT-NHTSA “Proposed Rulemaking to Establish Light-Duty Vehicle Greenhouse Gas Emission Standards and Corporate Average Fuel Economy Standards,” *Federal Register*, vol. 74, no. 186, September 28, 2009; “2010” means agreed interagency values released in Interagency Working Group on Social Cost of Carbon, “Technical Support Document: Social Cost of Carbon for Regulatory Impact Analysis Under Executive Order 12866,” February 2010, <http://www.whitehouse.gov/sites/default/files/omb/inforeg/for-agencies/Social-Cost-of-Carbon-for-RIA.pdf>; “2013a” means updated values released in Interagency Working Group on Social Cost of Carbon, “Technical Support Document: Technical Update of the Social Cost of Carbon for Regulatory Impact Analysis Under Executive Order 12866,” May 2013, <http://www.whitehouse.gov/sites/default/files/omb/assets/inforeg/technical-update-social-cost-of-carbon-for-regulator-impact-analysis.pdf>; and “2013b” means revised (corrected) values released in Interagency Working Group on Social Cost of Carbon, “Technical Support Document: Technical Update of the Social Cost of Carbon for Regulatory Impact Analysis Under Executive Order 12866,” May 2013, revised November 2013, <http://www.whitehouse.gov/sites/default/files/omb/assets/inforeg/technical-update-social-cost-of-carbon-for-regulator-impact-analysis.pdf>. “2015” means the July 2, 2015 revision to the Technical Update document, available at <https://www.whitehouse.gov/sites/default/files/omb/inforeg/scc-tsd-final-july-2015.pdf>. The 2015 source for the SC-CH<sub>4</sub> is A. L. Marten et al., “Incremental CH<sub>4</sub> and N<sub>2</sub>O Mitigation Benefits Consistent with the U.S. Government’s SC-CO<sub>2</sub> Estimates,” *Climate Policy* (2014, online publication; 2015, print publication); and Marten et al., “Corrigendum,” *Climate Policy*, vol. 15, no. 5 (2015).

**Notes:** The values are emissions-year specific. Estimates using several discount rates are included because the literature shows that estimates of the SC-CO<sub>2</sub> (and SC-CH<sub>4</sub>) are sensitive to assumptions about the discount rate and because no consensus exists on the appropriate rate to use in an intergenerational context (where costs and benefits are incurred by different generations). The fourth value is the 95<sup>th</sup> percentile of the SC-CH<sub>4</sub> estimates across three models using a 3% discount rate. It is included to represent higher-than-expected impacts from temperature change further out in the tails of the SC-CH<sub>4</sub> distribution. Marten et al. adjusted the estimates in this table to reflect the 2015 minor technical corrections to the SC-CO<sub>2</sub> estimates.
